ASTRILL VPN · INDEPENDENT GUIDE

Astrill Vpn for Windows: setup guide

Install, sign in, connect and verify on a Windows PC or laptop.

Before you start

1. An active Astrill account and your login email and password.
2. Uninstall or disconnect any other VPN app on this device.
3. About ten minutes and a working internet connection.

Install

1. Open https://astrillvpn.app/download and choose Windows.
2. Run the installer. When Windows asks to allow changes, check the publisher name looks genuine, then click Yes.
3. Allow the network adapter or driver to install. The VPN needs it to build the tunnel.
4. If your firewall or antivirus asks about the app, allow it. Do not switch protection off.

Connect

1. Open Astrill Vpn and sign in.
2. Select a nearby server for best speed.
3. Keep the default protocol for your first test, then press connect.
4. Optional: set the app to start with Windows.

Verify the connection

1. Check your IP address on a lookup site. It should show the VPN server location.
2. Run a DNS leak test. DNS servers should not belong to your home internet provider.
3. Turn on the kill switch or connection guard option if your app offers one.

If it does not connect

1. Try another server, then another protocol.
2. Check that the Windows date and time are set automatically.
3. Restart the PC and try again.

Get the genuine Astrill Vpn app from our download center: https://astrillvpn.app/download . This guide contains no software. It was written by https://astrillvpn.app, an independent website that is not affiliated with, owned by or endorsed by Astrill. App screens and options can change between versions. Free for personal use.
